**POLYPROPYLENE CUPS
REUSABLE AND CUSTOMIZABLE**

GENERAL CATALOG

...for a more sustainable world

GENERAL CHARACTERISTICS

Homo Polypropylene is a durable, resistant and functional plastic material, ideal to be reused countless times, finally being 100% recyclable.

The cups are light, stackable and with a surface finish adapted for a good hold.

They can be washed in the dishwasher, easily resisting the washing temperatures necessary for cleaning and disinfection.

The regulations for food use within the EC regulation 1935/2004 of 2004 are complied with.

Bisphenol A free

Ideal cups for any sustainable and environmentally friendly event.

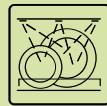

Homopolymer
homopolypropylene

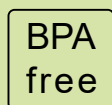

Microwave safe

Food Use Product

Dishwasher safe

Recyclable material

...for a more sustainable world

PRINTING TECHNIQUES:

The printing or personalization techniques of the cups and other products are carried out using screen printing techniques and in full color with the In Mold Labeling "IML" system. These printing techniques are of high quality and guarantee its durability and permanence.

SERIGRAPHY

Screen printing is an ancient technique. The design is applied to the cups through a polyester cloth adhered to a rigid frame where the image to be printed has previously been prepared.

The decoration is of the highest quality, resistant and durable. Optimal technique for the reuse of the product.

Once the product is decorated, it complies with Food Safety Regulations.

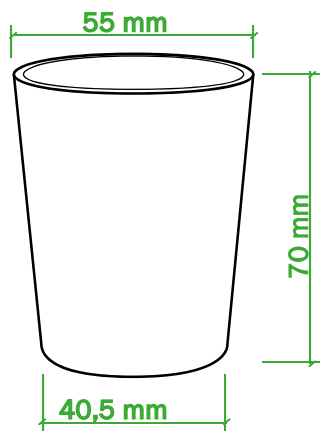

IN MOULD LABELING (IML)

The In Mold Labeling printing technique is based on the application of a Homo Polypropylene label, previously decorated in full colour, inside the injection mold in such a way that the product comes out completely finished and decorated.

The process and decoration is of the highest quality, resistant and durable. Optimal for its reuse.

Once the product is decorated, it complies with Food Safety Regulations.

Ideal cups for coffee and shots

Material: Homo polypropylene

Capacity: 11cl

Weight: 11 grams

Surface finish: Translucent

Cup colour:

Printing techniques: Screen printing or IML
